Reflection Control Panel Marine

REFLECTION CONTROL PANEL MARINE

The Complete Acoustic Treatment Systems Reflection Control Panel Marine is an acoustic treatment unit which optimises room reflections. It incorporates countersunk mounting points and is just 50 mm deep. The thermoformed solid surface panel meets even the most stringent marine fire resistance requirements.

The CATS Reflection Control Panel Marine is a complex engineered surface designed for wall mounting and which scatters room reflections for clearer, more enveloping audio at mid and high frequencies.

The Reflection Control Panel Marine is a **3 mm rigid thermoformed solid surface** which has been injection moulded in CATS proprietary layout for maximum performance and ease of install with four countersunk mounting points.

The Reflection Control Panel Marine has a total depth of just 50 mm making it one of the **shallowest reflection treatment solutions available.**

Dimensions Per Panel	300 x 50 x 300 mm (WDH)
Weight Per Panel	850g
Box Quantity	All panels made to order
Acoustic Data	Please see www.c-ats.co.uk/technical-information

Complete Acoustic Treatment System has been designed to specifically address the "Three Rs of Acoustics":

- Resonance
- Reverberation
- Reflection

Each component in the system is targeted at one of these three acoustical problems resulting in a comprehensive and repeatable solution that remains easy to install and integrate in to the room. All of this is achieved within a depth of just 50mm.
